

A man with a beard and short dark hair is sitting at a desk in an office. He is wearing a light blue button-down shirt and a black headset with a microphone. He is smiling slightly and looking towards the camera. His right hand is on a black mouse on a mousepad. In the background, there are office cubicles and desks with various items on them. A red banner is overlaid at the bottom of the image with the text 'Headset Catalog' in white.

# Headset Catalog

## freeVoice – Innovative Headsets

Headsets have become an essential part of our working day and increasingly so in our private lives as well. Straightforward consumer headsets can be had today from all consumer electronics shops and can be bought without consulting or service. Professional headsets continue to represent a small investment for the company. The decision as to which headset is suitable for which purpose requires consulting. At the same time, it is also important that the headset is always ready for use, this is why it requires proper care and also fast and reliable service in the event of a defect.

### Market changes

The big headset makers are looking for increasingly direct contact with the end customer. But this is done in a relatively passive way without direct consulting and with no service. As a dealer we do not want to be reduced to merely «product pushers» who only handle the logistics. Which is why we have decided to develop our own line of headsets for the professional sector.

### freeVoice headsets

Headsets from freeVoice stand out thanks to their outstanding wearing comfort. The design and the sound give you the feeling of a face-to-face conversation. It almost lets you forget you are on the phone. The ergonomic and functional design offer even more comfort for people who spend a lot of time on the phone and at a very reasonable price.

Headsets are usually recognized as simple audio devices. To use other functions such as call control, is additional software needed to connect to the various softphones and applications.

With the freeVoice UC Manager you have the possibility to control all functions such as: Mute, volume up / down, call control etc. with the headset. The UC Manager reads and synchronizes the various presence information from your softphone. In addition Busylights of the company Kuando are supported directly and communicate the Presence status reliably.
